Certificate

about the cosmetic product

Lipid Care

Clinical application study under dermatological control

(Test period March/June 2023)

The test product was applied over a period of four weeks by 20 subjects once daily on the body (on the affected skin area). From the clinical-dermatological point of view no relevant skin reactions occurred in the test area. The product was tolerated

excellently.

Neither intolerance reactions suggestive of irritation nor allergic reactions (contact dermatitis) were detected. Accordingly, from the dermatological point of view there is no high potential for irritation and sensitisation by the tested product when used as intended.

Based on the study design chosen and the confirmed skin tolerability, the 5-star seal can be used for the test product.
